noormanyulizarp@gmail.com
+6289634112503

With 10 years of building and operating test infrastructure across regulated fintech, edtech, and streaming platforms. Beyond testing, hands-on experience shipping production Python services (FastAPI), Kubernetes cluster setup, Docker deployments, and embedded system tooling engineering work that grew naturally from solving problems standard testing tools couldn't handle.

WORK EXPERIENCE

GOTO FINANCIAL (FINTECH) — ***Software Engineer In Test, January 2023 - PRESENT***

- Own quality end-to-end for high-traffic financial features (Wallet Balance, Order History, User Summary, AI Recommendation) and tax-critical reporting (User Transaction Statement), driving manual exploratory testing and automation coverage, and leading regression through final release sign-off to safeguard accuracy for GoPay's user base.
- Engineered test coverage for GoPay's AI Recommendation engine, validating and testing combinations against the recommendation model, ensuring accurate personalized suggestions are delivered to 8M+ daily active users.
- Designed and maintained test infrastructure for financial services serving 30M+ users across Indonesia, Malaysia, and Singapore. Covering API automation (Java, TestNG, Cucumber, RestAssured, gRPC), performance testing (Scala/Gatling, Python-based load suites), and observability via Grafana and Redis.
- Built the Crypto QA function from zero: established quality standards, authored automation processes, managed ArgoCD-based release pipelines, and owned release strategy for the $10M GoPay Crypto product.
- Spearheaded regulatory compliance certification under CFX and Bappebti, making GoPay one of only seven licensed crypto operators in Indonesia, delivered in 11 months against a multi-year industry norm

RUANGGURU (EDUTECH) — ***Software Engineer In Test, October 2021 - January 2023***

- Architected and shipped a production-grade low-code test automation platform (Node.js, Playwright, Prisma) adopted by 50+ engineers across QA and product teams, scaling test coverage from 85% to 97% across 1,000+ test cases.
- Built custom Python libraries extending Robot Framework's capabilities and deployed FastAPI-based internal services to simulate payment flows across staging and production-mirrored mock environments, accelerating test cycle turnaround for payment-critical features.
- Designed and operated a Kubernetes cluster for distributed test execution, enabling parallel automation at scale for a platform serving 53M+ students.
- Built a Python-based performance testing suite and maintained Locust-driven load simulations across critical user journeys, fully integrated into Jenkins CI/CD pipelines for continuous performance validation.

VIDIO.COM (STREAMING MEDIA) — ***Test Engineer Team Lead, December 2018 - October 2021***

- Architected Indonesia's first internally-controlled TV device farm, writing custom Python services for infrared sensor control, STB and Android TV orchestration, and embedded system automation solving multi-device testing at scale where Appium and Selenium offered zero coverage.
- Built custom Robot Framework libraries and FastAPI-based mock services to simulate payment flows, user sessions, and third-party integrations across staging environments, enabling reliable end-to-end testing without external dependencies.
- Integrated OCR technology into the Robot Framework pipeline via a custom-built Python library, enabling UI validation on TV platforms with no standard accessibility APIs and sustaining 90%+ test coverage across Web, iOS, Android, and Smart TV — a platform serving 45M+ MAU and 5M+ paid subscribers.

- Partnered with DevOps to lead test infrastructure migration and full service validation during an AWS-to-GCP cloud migration, completed overnight with zero downtime and a 40% reduction in infrastructure cost.

Bank Indonesia (Central bank of Indonesia) **Quality Assurance, August - December 2018**

- Executed comprehensive manual testing and UAT for Bank Indonesia's internal bank-to-bank transfer infrastructure, validating newly developed modules against complex financial compliance and business logic to ensure transaction reliability and cross-bank operational stability.
- Served as core UAT tester for Indonesia's national pilot of QRIS (Quick Response Code Indonesian Standard), validating data accuracy and secure integration across participating banks ahead of wide-scale nationwide deployment.
- Owned end-to-end defect lifecycle management, requirement mapping, and cross-team test coordination via Jira, systematically validating compliance-critical modules across a high-stakes, multi-stakeholder financial infrastructure project.

Jenius (SMBC Bank) ***FullStack Developer, January - April 2018***

- Engineered frontend architecture for Jenius, Indonesia's first digital banking application, built with React.js under a strict Test-Driven Development (TDD) methodology for mission-critical banking services.
- Implemented a comprehensive testing strategy spanning unit testing (Jest), API mocking (Axios-Moxios), and cross-layer coverage (Sinon, Mocha, Chai, Karma JS), achieving 98% across core banking modules.
- Streamlined deployment pipelines and CI processes via OpenShift and Jenkins, enabling daily releases with zero critical deployment incidents for high-reliability banking code delivery.

Docotel (Software House) ***FullStack Developer, October 2016 - January 2018***

- Designed and developed full-stack web applications using PHP-based frameworks (Yii 1 and Yii 2) to solve complex business requirements across docotel projects, delivering optimized backend performance for digital transformation initiatives.
- Integrated Vue.js into core systems to modernize frontend reactivity, delivering seamless user interfaces across docotel clients and accelerating digital transformation timelines.

Jendral Software (Software House) ***FullStack Developer, June 2014 - January 2018***

- Built and maintained full-stack web applications specialized in school management systems, owning the end-to-end development lifecycle from requirements to deployment
- Authored backend logic and relational database architecture using PHP and MySQL, translating operational requirements from the education sector into scalable software solutions

EDUCATION

Jenderal Soedirman University **2012-2016**

Bachelor Of Software Engineering - GPA 3.51

SKILLS

- ***Automation Frameworks***: ROBOT FRAMEWORK, PLAYWRIGHT, CYPRESS, CUCUMBER, XCUI, RestAssured, Appium, Selenium. Performance Testing: GATLING, LOCUST, FastAPI
- ***Languages/Scripting:*** PYTHON, JAVASCRIPT, TYPESCRIPT, JAVA, GROOVY, SQL, PSQL, SCALA
- ***CI/CD***: GRADLE, MAVEN, GRPC, XPATH, OpenShift, Jenkins, AWS
- ***Web/DB Tools:*** REACT JS, VUE JS, REMIX JS, PRISMA DB, REACT NATIVE, MySQL
- **AI/LLM Tooling**: RAG pipelines, Custom MCP servers, Multi-agent orchestration, Vector DBs (Chroma, Qdrant), Ollama/MLX, Custom Persistent context/memory systems for AI agents
