Re: QA Automation Engineer — Baltic Amadeus (banking client)

Application for QA Automation Engineer (Baltic States, Fully Remote)

Dear Tatiana,

I am writing to apply for the QA Automation Engineer position at Bonapolia, supporting Baltic Amadeus's banking client. With 10 years of professional QA experience — most recently owning end-to-end quality for GoPay financial features serving 30M+ users, and previously serving as Test Engineer Team Lead at Vidio.com — my background aligns strongly with the role's combination of Java-based automation, mobile testing, and banking domain expertise.

On Java test automation specifically — at GoPay I design and maintain Java-based test automation infrastructure covering API automation (Java, TestNG, Cucumber, RestAssured, gRPC), mobile testing via Appium (iOS and Android), and integration with CI/CD pipelines (Jenkins, OpenShift, ArgoCD). My daily stack includes Java + TestNG + RestAssured for API testing, which maps directly to the Bonapolia role's required Selenide + TestNG + REST-assured stack. While Selenide specifically is new to me, it's a Selenium wrapper — I have deep Selenium expertise from 10 years of mobile/web automation, so the transition would be straightforward.

On mobile testing across iOS and Android — I currently own end-to-end testing for the GoPay native iOS and Android apps, covering UI, backend, API, and integration layers for high-traffic financial features. I test across multiple device sizes, screen densities, and OS versions (Android 8-14, iOS 13-17). At Vidio.com (45M+ MAU streaming platform), I architected Indonesia's first internally-controlled mobile device farm — writing custom Python services for infrared sensor control, STB and Android TV orchestration. This is the same concept as LambdaTest, BrowserStack, or Sauce Labs, but built in-house.

On banking domain experience — my career has been deeply embedded in fintech and banking. Beyond GoPay's regulated financial services (CFX/Bappebti crypto compliance certification in 11 months), I served as core UAT tester for Bank Indonesia's national QRIS pilot, validating bank-to-bank transfer infrastructure. I also worked as FullStack Developer at Jenius (Indonesia's first digital bank), giving me developer-side perspective on banking applications. Banking is where I'm most comfortable.

On B2B contractor eligibility — I confirm I am eligible to work as a B2B contractor (self-employed) in Indonesia. I am based in Jakarta and would establish a PT Perorangan (individual limited company) to contract with Bonapolia under Indonesian law, invoicing monthly per your B2B model. I already have an NPWP (Indonesian tax ID) and am familiar with international B2B contracting (Wise business account, etc.).

On English proficiency — I am fluent in English (10 years working in international tech companies, daily English communication across Indonesia/Malaysia/Singapore teams). I am comfortable presenting to senior stakeholders on Zoom calls, as your form explicitly asks.

On the Baltic states location and remote work — I am comfortable working fully remote from Jakarta, Indonesia. The Baltic states timezone (EET/EEST, UTC+2/+3) is 4-5 hours ahead of WIB, which is manageable for synchronous calls during overlap hours (12:00-17:00 WIB / 07:00-12:00 EET). I am also open to occasional travel to the Baltics if needed for project kickoff or key milestones.

I have attached my CV detailing the experience above. I would welcome the opportunity to discuss how my Java automation, mobile testing, and banking domain experience can help Baltic Amadeus ensure the quality of their mobile banking applications through to June 2027 and beyond.

Best regards,

Noorman Yulizar Prabowo
