DNA.inc — Talent Acquisition
Senior Quality Engineer (Europe Remote / Amsterdam / Madrid / Valencia)
Application via: https://careers.dna.inc/o/senior-quality-engineer

Re: Application for Senior Quality Engineer

Dear DNA.inc Hiring Team,

I am writing to apply for the Senior Quality Engineer position at DNA.inc. When I read that DNA.inc works on high-performance applications including TV platforms, and that your team has contributed to Disney+, ESPN+, Eurosport, and SiriusXM — I knew this was a rare match. My 10 years of QA experience map almost perfectly to your requirements: streaming media testing at Vidio.com (45M+ MAU, 5M+ paid subscribers), TV platform testing via Indonesia's first internally-controlled TV device farm, native mobile testing at GoPay (30M+ users across iOS/Android), Python as my primary language, and AI-augmented QA tooling (RAG pipelines, custom MCP servers).

On TV platforms specifically — at Vidio.com I architected Indonesia's first internally-controlled TV device farm, writing custom Python services for infrared sensor control, STB and Android TV orchestration, and embedded system automation. This solved multi-device testing at scale where Appium and Selenium offered zero coverage. I owned testing across multiple device types, screen sizes, and OS versions for Smart TV platforms (Tizen, webOS, Android TV) — exactly the multi-device, screen-size, OS-version testing your JD describes.

On native mobile testing — currently at GoPay, I own end-to-end manual testing and automation for the GoPay native iOS and Android apps (Wallet Balance, Order History, User Summary, AI Recommendation, User Transaction Statement) serving 30M+ users. I test across multiple device sizes, screen densities, and OS versions (Android 8-14, iOS 13-17). This is direct, current, hands-on experience with what your JD requires.

On AI-based QA tooling — this is where I'd love to contribute. I have hands-on experience building RAG pipelines with vector databases (Chroma, Qdrant), custom MCP servers for tool-using AI agents, multi-agent orchestration, and persistent context and memory systems for AI agents. I host local LLMs via Ollama and MLX for development and evaluation. I would be excited to help shape DNA.inc's in-house, AI-based QA tooling — this is genuinely the kind of work I want to do more of, and the JD mentioning it explicitly was a strong signal.

On Python and software development background — Python is my primary language (FastAPI, Robot Framework custom libraries, Locust, PyTest). My career started as a FullStack developer (PHP/Yii, React.js, Vue.js) before specializing in QA, so I bring both the QA discipline and the engineering mindset — useful for being a driving force in your young QA division rather than just executing test cases.

On location and remote — I am currently based in Jakarta, Indonesia. I am open to relocation to Amsterdam, Madrid, or Valencia, or to a fully remote setup with periodic company offsites. EU work authorization would need to be arranged — I am happy to discuss visa options (Spain's Digital Nomad Visa, Netherlands HSM visa, or contractor setup) in the first interview.

I have attached my CV detailing the experience above. I would welcome the opportunity to discuss how my streaming, TV platform, mobile testing, Python, and AI-augmented QA experience can help DNA.inc's young QA division become a driving force in your clients' next-generation streaming products.

Best regards,

Noorman Yulizar Prabowo
