Hitachi eBworx Sdn. Bhd.
Talent Acquisition Team
Quality Assurance Analyst — Experienced Professional
Malaysia

Re: Application for Quality Assurance Analyst — Malaysia

Dear Hiring Manager,

I am writing to apply for the Quality Assurance Analyst position at Hitachi eBworx. With 10 years of professional software testing experience — including direct QA work for GoPay (GoTo Financial), Bank Indonesia's national QRIS pilot, and as Test Engineer Team Lead at Vidio.com — my background aligns strongly with your requirement for a QA professional with at least 4 years of experience in the financial industry.

My day-to-day responsibilities at GoPay directly mirror the Hitachi eBworx role description. I identify testable requirements, develop test plans, testability matrix, and traceability matrix for high-traffic financial features serving 30M+ users across Indonesia, Malaysia, and Singapore. I design, review, execute, and maintain a set of test cases validating financial software systems against customer-agreed requirements — covering manual exploratory testing, regression, and final release sign-off. I report testing progress and quality status to engineering, product, and compliance stakeholders on a regular cadence.

Defect management is core to my practice. I own end-to-end defect lifecycle in JIRA — from identification and documentation through triage, cross-team coordination, and leakage density tracking across multi-stakeholder programs. At Bank Indonesia, I authored test plans and traceability matrixes for the national QRIS pilot, validating compliance-critical modules across participating banks ahead of nationwide deployment. I also leverage extensive SQL knowledge (PostgreSQL, MySQL, PSQL) to validate data integrity across transaction logs, reconciliation tables, and audit trails.

On team leadership — as Test Engineer Team Lead at Vidio.com (45M+ MAU, 5M+ paid subscribers), I led the QA team owning test strategy, test plan development, and stakeholder reporting across Web, iOS, Android, and Smart TV. I managed defect lifecycle and leakage density across the team, conducted Test Audit and Analysis presentations to leadership on a regular cadence, and mentored junior QA engineers on test case design, defect documentation, and stakeholder communication.

I am also comfortable collaborating with Test Automation Engineers. At Ruangguru, I architected a low-code test automation platform (Node.js, Playwright, Prisma) adopted by 50+ engineers, scaling coverage from 85% to 97% across 1,000+ test cases. I bring the rare combination of strong manual QA fundamentals AND automation engineering depth — useful for the Hitachi eBworx model where QA Analysts work alongside Test Automation Engineers.

What draws me to Hitachi eBworx specifically is the opportunity to work on banking and financial software at regional scale — an area where I have direct, proven experience (GoPay Crypto $10M product with CFX/Bappebti certification delivered in 11 months vs multi-year industry norm; Bank Indonesia QRIS national pilot; Jenius digital bank React.js engineering under strict TDD). I am willing to travel within the region and open to overseas assignment, and I am legally able to work in Malaysia subject to standard employment visa sponsorship by Hitachi eBworx.

I have attached my CV detailing my experience and would welcome the opportunity to discuss how my background in financial-industry QA, test team leadership, and automation collaboration can contribute to Hitachi eBworx's delivery excellence.

Yours sincerely,

Noorman Yulizar Prabowo
