NOORMAN YULIZAR PRABOWO

AI ENGINEER / ML ENGINEER / AI APPLICATION ENGINEER

noormanyulizarp@gmail.com | +6289634112503 | linkedin.com/in/noormanyulizarp

PROFILE SUMMARY

AI engineer with 10+ years of software engineering across fintech, edtech, and streaming platforms. Hands-on with RAG pipelines, custom MCP servers, multi-agent orchestration, vector databases (Chroma, Qdrant), local LLM hosting (Ollama, MLX), and persistent context/memory systems for AI agents. Built and validated the GoPay AI Recommendation engine serving 8M+ daily active users. Bridges production engineering, evaluation methodology, and applied AI — strong background in Python (FastAPI), Kubernetes-orchestrated distributed execution, and CI-integrated model validation.

CORE SKILLS

AI/LLM Tooling: RAG pipelines, Custom MCP servers, Multi-agent orchestration, Vector DBs (Chroma, Qdrant), Ollama, MLX

Persistent Memory: Custom persistent context & memory systems for AI agents

Languages: Python (FastAPI), JavaScript, TypeScript, Java, Scala, SQL

Infra & Orchestration: Docker, Kubernetes (distributed inference & evaluation), AWS, GCP

Evaluation & Testing: Combinatorial test generation, model-driven validation pipelines, OCR integration for multimodal evaluation

Backend: REST, gRPC, FastAPI, Node.js, Prisma, MySQL, PostgreSQL

MLOps: Jenkins CI/CD integration, ArgoCD, Grafana observability

WORK EXPERIENCE

GoTo Financial (GoPay) | Jakarta, Indonesia · Fintech

Software Engineer in Test *Jan 2023 — Present*

- ▸ Built and validated the GoPay AI Recommendation engine — combinatorial test design against the recommendation model, ensuring accurate personalized suggestions delivered to 8M+ daily active users.
- ▸ Owned end-to-end quality for AI-driven user-facing features (AI Recommendation, User Summary) serving 30M+ users across Indonesia, Malaysia, and Singapore.
- ▸ Designed evaluation pipelines for the recommendation model — covering ranking, retrieval, and personalized suggestion accuracy — integrated with CI for continuous model quality validation.
- ▸ Owned release engineering for the $10M GoPay Crypto product — ArgoCD-based release pipelines with full regression automation for crypto trading rails (CFX/Bappebti licensed).
- ▸ Spearheaded regulatory compliance certification (CFX + Bappebti) — making GoPay one of only seven licensed crypto operators in Indonesia, delivered in 11 months against a multi-year industry norm.

Ruangguru | Jakarta, Indonesia · EdTech

Software Engineer in Test *Oct 2021 — Jan 2023*

- ▸ Architected a production-grade low-code platform (Node.js, Playwright, Prisma) adopted by 50+ engineers — including evaluation harness tooling later reused for AI feature testing.
- ▸ Built Python libraries and FastAPI-based internal services simulating payment flows and user-session states — the same mock pattern later reused to drive RAG evaluation pipelines.
- ▸ Designed and operated a Kubernetes cluster for distributed execution at scale — directly applicable to distributed model inference and evaluation workloads.
- ▸ Built a Python-based load/performance testing suite with Locust — integrated into Jenkins CI/CD for continuous validation of critical user journeys on a 53M+ student platform.

Vidio.com | Jakarta, Indonesia · Streaming Media

Test Engineer Team Lead *Dec 2018 — Oct 2021*

- ▸ Architected and built custom Python services for embedded system automation (infrared sensor control, STB/Android TV orchestration) — a low-level integration pattern later applied to AI agent tool-use orchestration.

▸ Built FastAPI-based mock services simulating complex stateful flows (payments, user sessions, third-party integrations) — pattern directly applicable to LLM tool-use sandboxing and agent evaluation harnesses.

▸ Integrated OCR into the Robot Framework pipeline via a custom Python library — computer-vision-driven UI validation, pattern applicable to multimodal model evaluation.

Jenius (SMBC Bank) | Jakarta, Indonesia · Digital Banking

FullStack Developer *Jan 2018 — Apr 2018*

▸ Engineered React.js frontend architecture for Jenius under strict TDD — methodology later applied to building evaluation harnesses for AI features with deterministic, regression-tested behavior.

▸ Streamlined CI/CD pipelines via OpenShift and Jenkins — daily releases with zero critical incidents, a baseline reliability bar later carried into AI feature deployment.

Bank Indonesia (Central Bank of Indonesia) | Jakarta, Indonesia · Central Bank

Quality Assurance *Aug 2018 — Dec 2018*

▸ Validated business logic and data accuracy for Bank Indonesia's bank-to-bank transfer infrastructure — experience with high-stakes, compliance-critical validation directly applicable to AI feature gating and safety review.

▸ Served as core tester for the national QRIS pilot — applying systematic validation across multi-party data flows, a pattern directly reusable for multi-stakeholder AI evaluation pipelines.

▸ Owned defect lifecycle, requirement mapping, and cross-team coordination via Jira across a central-bank program.

Docotel | Jakarta, Indonesia · Software House

FullStack Developer *Oct 2016 — Jan 2018*

▸ Designed and developed full-stack web applications using PHP (Yii 1/2) and Vue.js across multiple client projects — full-lifecycle ownership including requirements, design, deployment.

Jendral Software | Indonesia · Software House

FullStack Developer *Jun 2014 — Jan 2018*

▸ Built full-stack web applications for school management systems — full-lifecycle ownership from requirements to deployment, including relational database design (PHP + MySQL).

EDUCATION

Jenderal Soedirman University *2012 - 2016*

Bachelor of Software Engineering — GPA 3.51
