NOORMAN YULIZAR PRABOWO

BACKEND ENGINEER / FULLSTACK ENGINEER

noormanyulizarp@gmail.com | +6289634112503 | linkedin.com/in/noormanyulizarp

PROFILE SUMMARY

Backend/fullstack engineer with 10+ years shipping production services across fintech, banking, edtech, and streaming. Hands-on with Python (FastAPI), Node.js, PHP (Yii), Java, and relational DB design (MySQL, Prisma). Built low-code internal platforms adopted by 50+ engineers, FastAPI mock services for payment flows, Kubernetes clusters for distributed execution, and backend integration for GoPay financial services serving 30M+ users. Strong CI/CD, observability, and release engineering background from regulated fintech environments.

CORE SKILLS

Backend Languages: Python (FastAPI), Node.js, TypeScript, Java, PHP (Yii 1/2), Groovy, Scala

Frontend: React.js, Vue.js, Remix.js, React Native

Databases: MySQL, PostgreSQL, Prisma ORM, Redis, Vector DBs (Chroma, Qdrant)

Infra & DevOps: Docker, Kubernetes, AWS, GCP, OpenShift, ArgoCD, Jenkins, GitHub Actions

APIs & Protocols: REST, gRPC, GraphQL, WebSockets

Observability: Grafana, Redis, Prometheus, Kibana

AI/LLM Tooling: RAG pipelines, Custom MCP servers, Multi-agent orchestration, Ollama/MLX

WORK EXPERIENCE

GoTo Financial (GoPay) | Jakarta, Indonesia · Fintech

Software Engineer in Test *Jan 2023 — Present*

- ▸ Built and operated backend services supporting GoPay financial features used by 30M+ users across Indonesia, Malaysia, and Singapore — covering wallet balance, transaction reporting, and AI recommendation delivery.
- ▸ Engineered the test/validation backend for the GoPay AI Recommendation engine — model-driven combinatorial validation serving 8M+ daily active users with accurate personalized suggestions.
- ▸ Owned release engineering for the $10M GoPay Crypto product — ArgoCD-based release pipelines, observability via Grafana and Redis, and backend integration with CFX/Bappebti-compliant crypto rails.
- ▸ Drove regulatory compliance certification (CFX + Bappebti) for GoPay Crypto — making GoPay one of only seven licensed crypto operators in Indonesia, delivered in 11 months against a multi-year industry norm.
- ▸ Partnered with product and platform engineering on API automation, gRPC service validation, and observability across Java-based financial microservices.

Ruangguru | Jakarta, Indonesia · EdTech

Software Engineer in Test *Oct 2021 — Jan 2023*

- ▸ Architected and shipped a production-grade low-code internal platform (Node.js, Playwright, Prisma) — adopted by 50+ engineers across QA and product teams, scaling test coverage from 85% to 97% across 1,000+ test cases.
- ▸ Designed and operated a Kubernetes cluster for distributed test execution at scale — supporting a platform serving 53M+ students with high-throughput parallel workloads.
- ▸ Built FastAPI-based internal services to simulate payment flows across staging and production-mirrored environments, accelerating development cycle for payment-critical features.
- ▸ Built a Python-based performance/load testing suite with Locust, fully integrated into Jenkins CI/CD pipelines — continuous performance validation for critical user journeys.

Vidio.com | Jakarta, Indonesia · Streaming Media

Test Engineer Team Lead *Dec 2018 — Oct 2021*

- ▸ Architected and built Indonesia's first internally-controlled TV device farm — custom Python services for infrared sensor control, STB/Android TV orchestration, and embedded system automation at scale.
- ▸ Built FastAPI-based mock services simulating payment flows, user sessions, and third-party integrations across staging environments — enabling reliable development without external dependencies.

▸ Integrated OCR technology into the Robot Framework pipeline via a custom Python library for UI validation on TV platforms without accessibility APIs — supporting a streaming platform serving 45M+ MAU and 5M+ paid subscribers.

Jenius (SMBC Bank) | Jakarta, Indonesia · Digital Banking

FullStack Developer *Jan 2018 — Apr 2018*

▸ Engineered frontend architecture for Jenius, Indonesia's first digital banking application — built with React.js under strict Test-Driven Development (TDD) methodology for mission-critical banking services.

▸ Implemented backend service integration and API layer with comprehensive testing (Jest, Axios-Moxios, Sinon, Mocha, Chai, Karma) — achieving 98% coverage across core banking modules.

▸ Streamlined deployment pipelines and CI processes via OpenShift and Jenkins — enabling daily releases with zero critical deployment incidents for high-reliability banking code delivery.

Docotel | Jakarta, Indonesia · Software House

FullStack Developer *Oct 2016 — Jan 2018*

▸ Designed and developed full-stack web applications using PHP-based frameworks (Yii 1 and Yii 2) for multiple client projects — delivering optimized backend performance for digital transformation initiatives.

▸ Integrated Vue.js into core systems to modernize frontend reactivity, delivering seamless user interfaces and accelerating client project delivery timelines.

▸ Owned backend logic and relational database architecture (PHP + MySQL), translating business requirements into scalable software solutions across diverse client domains.

Jendral Software | Indonesia · Software House

FullStack Developer *Jun 2014 — Jan 2018*

▸ Built and maintained full-stack web applications specialized in school management systems — owning the end-to-end development lifecycle from requirements to deployment.

▸ Authored backend logic and relational database architecture using PHP and MySQL, translating operational requirements from the education sector into scalable software solutions.

Bank Indonesia (Central Bank of Indonesia) | Jakarta, Indonesia · Central Bank

Quality Assurance *Aug 2018 — Dec 2018*

▸ Owned UAT and validation for Bank Indonesia's internal bank-to-bank transfer infrastructure — verifying compliance-critical transaction flows and cross-bank operational stability.

▸ Served as core tester for the national QRIS pilot — validating data accuracy and integration across participating banks ahead of nationwide deployment.

▸ Mapped requirements to test coverage across a multi-stakeholder central-bank program — building the traceability matrix later used for regression automation.

EDUCATION

Jenderal Soedirman University *2012 - 2016*

Bachelor of Software Engineering — GPA 3.51
