NOORMAN YULIZAR PRABOWO

SOFTWARE ENGINEER — TEST INFRASTRUCTURE / FULLSTACK / AI ENGINEERING

noormanyulizarp@gmail.com | +6289634112503 | linkedin.com/in/noormanyulizarp

PROFILE SUMMARY

Software engineer with 10 years of building and operating test infrastructure across regulated fintech, edtech, and streaming platforms. Beyond testing, hands-on experience shipping production Python services (FastAPI), Kubernetes cluster setup, Docker deployments, embedded system tooling, and applied AI/LLM engineering (RAG pipelines, custom MCP servers, multi-agent orchestration, vector databases). Career spans FullStack development (PHP, React, Vue), backend service engineering (FastAPI, Node.js, Java), and test infrastructure engineering — work that grew naturally from solving problems standard tools couldn't handle.

CORE SKILLS

Automation Frameworks: Robot Framework, Playwright, Cypress, Cucumber, XCUI, RestAssured, Appium, Selenium

Performance Testing: Gatling, Locust, FastAPI-based load suites

Languages/Scripting: Python, JavaScript, TypeScript, Java, Groovy, SQL, PSQL, Scala

CI/CD: Gradle, Maven, gRPC, XPath, OpenShift, Jenkins, AWS, ArgoCD

Web/DB Tools: React.js, Vue.js, Remix.js, Prisma DB, React Native, MySQL

AI/LLM Tooling: RAG pipelines, Custom MCP servers, Multi-agent orchestration, Vector DBs (Chroma, Qdrant), Ollama/MLX, Custom Persistent context/memory systems for AI agents

WORK EXPERIENCE

GoTo Financial (GoPay) | Jakarta, Indonesia · Fintech

Software Engineer in Test *Jan 2023 — Present*

- ▸ Own end-to-end quality for high-traffic financial features (Wallet Balance, Order History, User Summary, AI Recommendation) and tax-critical reporting (User Transaction Statement), driving manual exploratory testing and automation coverage through final release sign-off for GoPay's user base.
- ▸ Engineered test coverage for GoPay's AI Recommendation engine, validating combinations against the recommendation model and ensuring accurate personalized suggestions reach 8M+ daily active users.
- ▸ Designed and maintained test infrastructure for financial services serving 30M+ users across Indonesia, Malaysia, and Singapore — covering API automation (Java, TestNG, Cucumber, RestAssured, gRPC), performance testing (Scala/Gatling, Python-based load suites), and observability via Grafana and Redis.
- ▸ Built the Crypto QA function from zero: established quality standards, authored automation processes, and managed ArgoCD-based release pipelines for the $10M GoPay Crypto product.
- ▸ Spearheaded regulatory compliance certification under CFX and Bappebti — making GoPay one of only seven licensed crypto operators in Indonesia, delivered in 11 months against a multi-year industry norm.

Ruangguru | Jakarta, Indonesia · EdTech

Software Engineer in Test *Oct 2021 — Jan 2023*

- ▸ Architected and shipped a production-grade low-code test automation platform (Node.js, Playwright, Prisma) adopted by 50+ engineers across QA and product teams, scaling test coverage from 85% to 97% across 1,000+ test cases.
- ▸ Built custom Python libraries extending Robot Framework's capabilities and deployed FastAPI-based internal services to simulate payment flows across staging and production-mirrored mock environments, accelerating test cycle turnaround for payment-critical features.
- ▸ Designed and operated a Kubernetes cluster for distributed test execution, enabling parallel automation at scale for a platform serving 53M+ students.
- ▸ Built a Python-based performance testing suite and maintained Locust-driven load simulations across critical user journeys, fully integrated into Jenkins CI/CD pipelines for continuous performance validation.

Vidio.com | Jakarta, Indonesia · Streaming Media

Test Engineer Team Lead *Dec 2018 — Oct 2021*

▸ Architected Indonesia's first internally-controlled TV device farm — writing custom Python services for infrared sensor control, STB and Android TV orchestration, and embedded system automation, solving multi-device testing at scale where Appium and Selenium offered zero coverage.

▸ Built custom Robot Framework libraries and FastAPI-based mock services to simulate payment flows, user sessions, and third-party integrations across staging environments, enabling reliable end-to-end testing without external dependencies.

▸ Integrated OCR technology into the Robot Framework pipeline via a custom-built Python library — enabling UI validation on TV platforms with no standard accessibility APIs and sustaining 90%+ test coverage across Web, iOS, Android, and Smart TV for a platform serving 45M+ MAU and 5M+ paid subscribers.

Bank Indonesia (Central Bank of Indonesia) | Jakarta, Indonesia · Central Bank

Quality Assurance *Aug 2018 — Dec 2018*

▸ Executed comprehensive manual testing and UAT for Bank Indonesia's internal bank-to-bank transfer infrastructure, validating newly developed modules against complex financial compliance and business logic to ensure transaction reliability and cross-bank operational stability.

▸ Served as core UAT tester for Indonesia's national pilot of QRIS (Quick Response Code Indonesian Standard), validating data accuracy and secure integration across participating banks ahead of wide-scale nationwide deployment.

▸ Owned end-to-end defect lifecycle management, requirement mapping, and cross-team test coordination via Jira, systematically validating compliance-critical modules across a high-stakes, multi-stakeholder financial infrastructure project.

Jenius (SMBC Bank) | Jakarta, Indonesia · Digital Banking

FullStack Developer *Jan 2018 — Apr 2018*

▸ Engineered frontend architecture for Jenius, Indonesia's first digital banking application — built with React.js under a strict Test-Driven Development (TDD) methodology for mission-critical banking services.

▸ Implemented a comprehensive testing strategy spanning unit testing (Jest), API mocking (Axios-Moxios), and cross-layer coverage (Sinon, Mocha, Chai, Karma JS), achieving 98% across core banking modules.

▸ Streamlined deployment pipelines and CI processes via OpenShift and Jenkins — enabling daily releases with zero critical deployment incidents for high-reliability banking code delivery.

Docotel | Jakarta, Indonesia · Software House

FullStack Developer *Oct 2016 — Jan 2018*

▸ Designed and developed full-stack web applications using PHP-based frameworks (Yii 1 and Yii 2) to solve complex business requirements across multiple client projects, delivering optimized backend performance for digital transformation initiatives.

▸ Integrated Vue.js into core systems to modernize frontend reactivity, delivering seamless user interfaces across client projects and accelerating digital transformation timelines.

Jendral Software | Indonesia · Software House

FullStack Developer *Jun 2014 — Jan 2018*

▸ Built and maintained full-stack web applications specialized in school management systems — owning the end-to-end development lifecycle from requirements to deployment.

▸ Authored backend logic and relational database architecture using PHP and MySQL, translating operational requirements from the education sector into scalable software solutions.

EDUCATION

Jenderal Soedirman University *2012 - 2016*

Bachelor of Software Engineering — GPA 3.51
