NOORMAN YULIZAR PRABOWO

SOFTWARE DEVELOPMENT ENGINEER IN TEST (SDET)

noormanyulizarp@gmail.com | +6289634112503 | linkedin.com/in/noormanyulizarp

PROFILE SUMMARY

10 years building test automation infrastructure, frameworks, and internal tooling across regulated fintech, edtech, and streaming platforms. Ships production-grade automation platforms (Node.js, Playwright, Prisma) adopted by 50+ engineers, operates Kubernetes clusters for distributed test execution at scale, and owns release engineering for $10M+ products. Beyond testing, ships production Python services (FastAPI), Docker deployments, and embedded system tooling — engineering that grew naturally from solving problems standard testing tools couldn't handle.

CORE SKILLS

Automation Engineering: Playwright, Cypress, Robot Framework (custom library author), Cucumber, RestAssured, Appium, Selenium, XCUI

Languages: Python, JavaScript, TypeScript, Java, Groovy, Scala, SQL, PSQL

Backend & Infra: FastAPI, Node.js, Prisma, Docker, Kubernetes, ArgoCD, AWS, GCP

CI/CD & Release: Jenkins, OpenShift, Gradle, Maven, gRPC, GitHub Actions

Performance Engineering: Gatling (Scala), Locust (Python), custom Python load suites

Platform Engineering: Test orchestration platforms, device farms, embedded system automation, OCR integration

WORK EXPERIENCE

GoTo Financial (GoPay) | Jakarta, Indonesia · Fintech

Software Engineer in Test *Jan 2023 — Present*

- ▸ Architected and owned the test automation infrastructure for GoPay financial services serving 30M+ users across Indonesia, Malaysia, and Singapore — covering API automation (Java, TestNG, Cucumber, RestAssured, gRPC) and observability via Grafana and Redis.
- ▸ Designed the automation framework for the AI Recommendation engine: model-driven combinatorial test generation, validation pipelines for 8M+ daily active users, and regression gates in CI.
- ▸ Owned release engineering for the $10M GoPay Crypto product — ArgoCD-based release pipelines, quality gates, and rollout strategy with full rollback automation.
- ▸ Built the Crypto QA function from zero: established automation standards, integration with CFX/Bappebti compliance reporting, and end-to-end coverage for licensed crypto operations (one of only seven licensed operators in Indonesia).
- ▸ Drove regulatory compliance certification (CFX + Bappebti) — delivered in 11 months against a multi-year industry norm by parallelizing test certification work across teams.

Ruangguru | Jakarta, Indonesia · EdTech

Software Engineer in Test *Oct 2021 — Jan 2023*

- ▸ Architected and shipped a production-grade low-code test automation platform (Node.js, Playwright, Prisma) — adopted by 50+ engineers, scaling test coverage from 85% to 97% across 1,000+ test cases on a platform serving 53M+ students.
- ▸ Designed and operated a Kubernetes cluster for distributed test execution — enabling parallel automation at scale and reducing average test cycle time across critical user journeys.
- ▸ Built custom Python libraries extending Robot Framework and deployed FastAPI-based internal mock services simulating payment flows across staging and production-mirrored environments.
- ▸ Built a Python-based performance testing suite with Locust-driven load simulations across critical user journeys — fully integrated into Jenkins CI/CD pipelines for continuous performance validation.

Vidio.com | Jakarta, Indonesia · Streaming Media

Test Engineer Team Lead *Dec 2018 — Oct 2021*

- ▸ Architected Indonesia's first internally-controlled TV device farm — custom Python services for infrared sensor control, STB and Android TV orchestration, and embedded system automation; solved multi-device testing at scale where Appium/Selenium offered zero coverage.

▸ Built custom Robot Framework libraries and FastAPI-based mock services simulating payment flows, user sessions, and third-party integrations — enabling reliable end-to-end testing without external dependencies.

▸ Integrated OCR into the Robot Framework pipeline via a custom Python library — enabling UI validation on TV platforms without accessibility APIs, sustaining 90%+ test coverage across Web, iOS, Android, and Smart TV (45M+ MAU, 5M+ paid subscribers).

▸ Led the test engineering team — owning test strategy, framework roadmap, and quality gates across the streaming platform.

Bank Indonesia (Central Bank of Indonesia) | Jakarta, Indonesia · Central Bank

Quality Assurance *Aug 2018 — Dec 2018*

▸ Served as core UAT tester for Indonesia's national pilot of QRIS (Quick Response Code Indonesian Standard), validating data accuracy and secure integration across participating banks ahead of nationwide deployment.

▸ Owned defect lifecycle management and requirement mapping via Jira across a multi-stakeholder central-bank infrastructure project — building the traceability foundation later reused for automated regression coverage.

▸ Executed comprehensive UAT for Bank Indonesia's internal bank-to-bank transfer infrastructure, validating compliance-critical modules for transaction reliability and cross-bank operational stability.

Jenius (SMBC Bank) | Jakarta, Indonesia · Digital Banking

FullStack Developer *Jan 2018 — Apr 2018*

▸ Engineered frontend architecture for Jenius (Indonesia's first digital bank) — built with React.js under strict TDD; achieved 98% coverage across core banking modules via Jest, Axios-Moxios, Sinon, Mocha, Chai, and Karma.

▸ Streamlined deployment pipelines and CI processes via OpenShift and Jenkins — daily releases with zero critical deployment incidents for high-reliability banking code delivery.

EDUCATION

Jenderal Soedirman University *2012 - 2016*

Bachelor of Software Engineering — GPA 3.51
