NOORMAN YULIZAR PRABOWO

QUALITY ASSURANCE ANALYST — Financial Industry Test Engineering

noormanyulizarp@gmail.com | +6289634112503 | linkedin.com/in/noormanyulizarp

PROFILE SUMMARY

Quality Assurance Analyst with 10 years of professional software testing experience across regulated financial services, edtech, and streaming media. Strong track record in test plan development, traceability matrix management, defect lifecycle ownership via JIRA, and leading test engineering teams. Hands-on with financial industry compliance testing including Bank Indonesia's national QRIS pilot and GoPay's regulated crypto certification. Combines manual testing depth with automation engineering skills — comfortable both executing test cases and collaborating with automation engineers to scale coverage.

CORE SKILLS

Test Management: Test plans, testability matrix, traceability matrix, test case design, review, execution, maintenance

Defect Management: JIRA (defect lifecycle owner), requirement mapping, cross-team coordination, leakage density tracking

Test Audit & Reporting: Stakeholder status reporting, test audit & analysis presentations, quality evaluation

Manual Testing: Exploratory testing, UAT, regression, functional, integration, system, acceptance testing

Automation Collaboration: Robot Framework, Playwright, Cypress, RestAssured — works alongside automation engineers

Performance Testing: Gatling (Scala), Locust (Python), load simulations in CI/CD

Languages/Scripting: Python, Java, JavaScript/TypeScript, SQL, PSQL, Groovy, Scala

CI/CD & Tools: JIRA, Jenkins, OpenShift, ArgoCD, GitHub Actions, AWS, Docker, Kubernetes, gRPC

Domain: Financial services (GoPay $10M Crypto, Bank Indonesia QRIS), Banking (Jenius/SMBC), EdTech, Streaming

WORK EXPERIENCE

GoTo Financial (GoPay) | Jakarta, Indonesia · Fintech

Software Engineer in Test *Jan 2023 — Present*

- ▸ Identify testable requirements and develop comprehensive test plans, testability matrix, and traceability matrix for high-traffic financial features (Wallet Balance, Order History, User Summary, AI Recommendation, User Transaction Statement) — serving 30M+ users across Indonesia, Malaysia, and Singapore.
- ▸ Design, review, execute, and maintain a set of test cases validating financial software systems against customer-agreed requirements — covering manual exploratory testing, regression, and final release sign-off.
- ▸ Own end-to-end defect lifecycle management in JIRA: defect identification, documentation, triage, cross-team coordination, and leakage density tracking across multi-stakeholder fintech programs.
- ▸ Collaborate with Test Automation Engineers to develop automated functional testing for GoPay's AI Recommendation engine — validating combinations against the recommendation model for 8M+ daily active users.
- ▸ Conduct Quality Evaluation and lead Test Audit and Analysis presentations to stakeholders from product, engineering, and compliance teams on testing progress, defect trends, and quality status.
- ▸ Built the Crypto QA function from zero for the $10M GoPay Crypto product — establishing quality standards, automation processes, and managing ArgoCD-based release pipelines (CFX/Bappebti licensed).

Ruangguru | Jakarta, Indonesia · EdTech

Software Engineer in Test *Oct 2021 — Jan 2023*

- ▸ Architected and shipped a production-grade low-code test automation platform (Node.js, Playwright, Prisma) — adopted by 50+ engineers across QA and product teams, scaling test coverage from 85% to 97% across 1,000+ test cases on a platform serving 53M+ students.
- ▸ Designed and maintained test plans and traceability matrixes across critical user journeys — collaborating with product and engineering stakeholders to align testable requirements with delivery timelines.
- ▸ Built custom Python libraries extending Robot Framework's capabilities and deployed FastAPI-based internal mock services to simulate payment flows across staging and production-mirrored environments.
- ▸ Operated a Kubernetes cluster for distributed test execution — enabling parallel automation at scale and reducing test cycle turnaround for payment-critical features.

▸ Built a Python-based performance testing suite with Locust-driven load simulations across critical user journeys — fully integrated into Jenkins CI/CD pipelines for continuous performance validation.

Vidio.com | Jakarta, Indonesia · Streaming Media

Test Engineer Team Lead *Dec 2018 — Oct 2021*

▸ Led the Test Engineering team owning QA strategy, test plan development, and stakeholder reporting across Web, iOS, Android, and Smart TV for a streaming platform serving 45M+ MAU and 5M+ paid subscribers — sustaining 90%+ test coverage across all four surfaces.

▸ Managed defect lifecycle and leakage density across the testing team via JIRA — conducting Test Audit and Analysis presentations to engineering leadership, product, and operations stakeholders on a regular cadence.

▸ Architected Indonesia's first internally-controlled TV device farm — writing custom Python services for infrared sensor control, STB and Android TV orchestration, and embedded system automation, solving multi-device testing at scale where Appium and Selenium offered zero coverage.

▸ Built custom Robot Framework libraries and FastAPI-based mock services simulating payment flows, user sessions, and third-party integrations across staging environments — enabling reliable end-to-end testing without external dependencies.

▸ Integrated OCR technology into the Robot Framework pipeline via a custom-built Python library — enabling UI validation on TV platforms with no standard accessibility APIs and sustaining 90%+ test coverage.

▸ Mentored junior QA engineers on test case design, defect documentation, and stakeholder communication — building a high-performing testing team that consistently delivered on demanding timelines.

Bank Indonesia (Central Bank of Indonesia) | Jakarta, Indonesia · Central Bank

Quality Assurance *Aug 2018 — Dec 2018*

▸ Executed comprehensive manual testing and UAT for Bank Indonesia's internal bank-to-bank transfer infrastructure — validating newly developed modules against complex financial compliance and business logic to ensure transaction reliability and cross-bank operational stability.

▸ Served as core UAT tester for Indonesia's national pilot of QRIS (Quick Response Code Indonesian Standard) — validating data accuracy and secure integration across participating banks ahead of wide-scale nationwide deployment.

▸ Authored test plans, requirement traceability matrix, and defect documentation via JIRA across a high-stakes, multi-stakeholder financial infrastructure project — systematically validating compliance-critical modules.

▸ Used extensive SQL knowledge to validate data integrity across bank-to-bank transfer modules — querying transaction logs, reconciliation tables, and audit trails to verify test outcomes.

▸ Owned end-to-end defect lifecycle management and cross-team test coordination — presenting test progress and defect status to central-bank stakeholders from IT, operations, and compliance teams.

Jenius (SMBC Bank) | Jakarta, Indonesia · Digital Banking

FullStack Developer *Jan 2018 — Apr 2018*

▸ Engineered frontend architecture for Jenius, Indonesia's first digital banking application — built with React.js under strict Test-Driven Development (TDD) methodology for mission-critical banking services.

▸ Implemented a comprehensive testing strategy spanning unit testing (Jest), API mocking (Axios-Moxios), and cross-layer coverage (Sinon, Mocha, Chai, Karma JS) — achieving 98% across core banking modules.

▸ Worked alongside QA team to validate banking features end-to-end — providing developer perspective on testability and contributing to test plan reviews.

EDUCATION

Jenderal Soedirman University *2012 - 2016*

Bachelor of Software Engineering — GPA 3.51
