NOORMAN YULIZAR PRABOWO

QA ENGINEER — Mobile, Web & Banking Sector

noormanyulizarp@gmail.com | +6289634112503 | linkedin.com/in/noormanyulizarp

PROFILE SUMMARY

QA Engineer with 10 years of professional experience across regulated fintech, edtech, and streaming media. Currently owns end-to-end quality for GoPay financial features (Wallet Balance, Order History, AI Recommendation, User Transaction Statement) across Android, iOS, and web platforms — serving 30M+ users. Specializes in regression testing through final release sign-off, UI component testing at scale, and non-functional testing (performance, accessibility validation). Extensive banking-sector experience including Bank Indonesia's national QRIS pilot.

CORE SKILLS

Mobile Testing: Appium, XCUI, Espresso, Android, iOS, Smart TV, embedded device farm automation

Web Testing: Playwright, Cypress, Selenium, cross-browser, React/Vue/Remix frontends

Automation Frameworks: Robot Framework (custom library author), Playwright, Cypress, Cucumber, RestAssured

Regression & UI Component: Test orchestration platforms, low-code automation, 1,000+ test case management

Non-Functional: Performance (Gatling/Scala, Locust/Python), accessibility validation, OCR-based UI verification

Languages: Python, JavaScript, TypeScript, Java, Groovy, SQL, Scala

CI/CD: Jenkins, OpenShift, ArgoCD, GitHub Actions, AWS, Docker, Kubernetes

Domain: Fintech (GoPay $10M Crypto), Banking (Bank Indonesia QRIS pilot, Jenius digital bank)

WORK EXPERIENCE

GoTo Financial (GoPay) | Jakarta, Indonesia · Fintech

Software Engineer in Test *Jan 2023 — Present*

- ▸ Own end-to-end quality for high-traffic financial features (Wallet Balance, Order History, User Summary, AI Recommendation, User Transaction Statement) across Android, iOS, and web platforms — driving manual exploratory testing, automation coverage, and regression through final release sign-off for 30M+ users across Indonesia, Malaysia, and Singapore.
- ▸ Drive regression testing for the GoPay mobile banking application and web platform — ensuring existing functionality remains stable as new UI components ship in production. Quality ownership includes non-functional testing (performance via Gatling/Locust, accessibility validation).
- ▸ Engineered test coverage for GoPay's AI Recommendation engine — combinatorial testing against the recommendation model, ensuring accurate personalized suggestions reach 8M+ daily active users.
- ▸ Built the Crypto QA function from zero: established quality standards, authored automation processes, and managed ArgoCD-based release pipelines for the $10M GoPay Crypto product (CFX/Bappebti-compliant).
- ▸ Spearheaded regulatory compliance certification under CFX and Bappebti — making GoPay one of only seven licensed crypto operators in Indonesia, delivered in 11 months against a multi-year industry norm.

Ruangguru | Jakarta, Indonesia · EdTech

Software Engineer in Test *Oct 2021 — Jan 2023*

- ▸ Architected and shipped a production-grade low-code UI component testing platform (Node.js, Playwright, Prisma) adopted by 50+ engineers across QA and product teams — scaling test coverage from 85% to 97% across 1,000+ test cases on a platform serving 53M+ students.
- ▸ Built custom Python libraries extending Robot Framework's capabilities for cross-platform UI component testing — deployed FastAPI-based internal services to simulate payment flows across staging and production-mirrored mock environments.
- ▸ Designed and operated a Kubernetes cluster for distributed test execution — enabling parallel automation at scale across mobile and web platforms.
- ▸ Built a Python-based performance testing suite and maintained Locust-driven load simulations across critical user journeys, fully integrated into Jenkins CI/CD pipelines for continuous performance validation.

Vidio.com | Jakarta, Indonesia · Streaming Media

Test Engineer Team Lead *Dec 2018 — Oct 2021*

- ▸ Led the test engineering team owning QA strategy across Web, iOS, Android, and Smart TV for a streaming platform serving 45M+ MAU and 5M+ paid subscribers — sustaining 90%+ test coverage across all four surfaces.
- ▸ Architected Indonesia's first internally-controlled TV device farm — writing custom Python services for infrared sensor control, STB and Android TV orchestration, and embedded system automation, solving multi-device mobile testing at scale where Appium and Selenium offered zero coverage.
- ▸ Integrated OCR technology into the Robot Framework pipeline via a custom-built Python library — enabling UI validation on TV platforms with no standard accessibility APIs (a workaround directly applicable to accessibility testing gaps on non-standard surfaces).
- ▸ Built custom Robot Framework libraries and FastAPI-based mock services to simulate payment flows, user sessions, and third-party integrations across staging environments, enabling reliable end-to-end testing without external dependencies.

Bank Indonesia (Central Bank of Indonesia) | Jakarta, Indonesia · Central Bank

Quality Assurance *Aug 2018 — Dec 2018*

- ▸ Executed comprehensive manual testing and UAT for Bank Indonesia's internal bank-to-bank transfer infrastructure — validating newly developed modules against complex financial compliance and business logic to ensure transaction reliability and cross-bank operational stability.
- ▸ Served as core UAT tester for Indonesia's national pilot of QRIS (Quick Response Code Indonesian Standard) — validating data accuracy and secure integration across participating banks ahead of nationwide deployment.
- ▸ Owned end-to-end defect lifecycle management, requirement mapping, and cross-team test coordination via Jira across a high-stakes, multi-stakeholder financial infrastructure project.

Jenius (SMBC Bank) | Jakarta, Indonesia · Digital Banking

FullStack Developer *Jan 2018 — Apr 2018*

- ▸ Engineered frontend architecture for Jenius, Indonesia's first digital banking application — built with React.js under strict Test-Driven Development (TDD) methodology for mission-critical banking services.
- ▸ Implemented a comprehensive testing strategy spanning unit testing (Jest), API mocking (Axios-Moxios), and cross-layer coverage (Sinon, Mocha, Chai, Karma JS) — achieving 98% across core banking modules.
- ▸ Streamlined deployment pipelines and CI processes via OpenShift and Jenkins — enabling daily releases with zero critical deployment incidents for high-reliability banking code delivery.

EDUCATION

Jenderal Soedirman University *2012 - 2016*

Bachelor of Software Engineering — GPA 3.51
