NOORMAN YULIZAR PRABOWO

QA AUTOMATION ENGINEER — Java, Mobile & Banking Specialist

noormanyulizarp@gmail.com | +6289634112503 | linkedin.com/in/noormanyulizarp

PROFILE SUMMARY

QA Automation Engineer with 10 years of professional experience spanning manual testing and Java-based test automation across mobile (iOS/Android), web, and TV platforms. Strong banking and fintech domain experience — currently owning end-to-end quality for GoPay financial features serving 30M+ users, including API automation (Java, TestNG, Cucumber, RestAssured, gRPC) and mobile testing across iOS and Android. Previously led test engineering team at Vidio.com (45M+ MAU streaming platform) where I architected Indonesia's first internally-controlled mobile device farm. Hands-on with both manual exploratory testing and full Java/Selenium-based automation engineering.

CORE SKILLS

Java Test Automation: Java, TestNG, Cucumber, Selenide (Selenium wrapper), Maven, Gradle, RestAssured, gRPC

API Testing: REST-assured, Postman, gRPC testing, mock services (FastAPI-based), API contract testing

Mobile Testing (iOS/Android): Appium, XCUI, Espresso, native iOS/Android testing, multi-device, multi-OS-version testing

Cloud Testing Platforms: LambdaTest, BrowserStack, Sauce Labs concepts (built own device farm at Vidio with custom Python services for infrared sensor control, STB/Android TV orchestration)

CI/CD Integration: Jenkins, GitHub Actions, OpenShift, ArgoCD, GitLab CI concepts, Docker, Kubernetes, AWS

Manual Testing: Exploratory testing, regression, UAT, functional, integration, system, acceptance testing

Test Management: Test plans, test cases, test data, traceability matrix, defect lifecycle in Jira, leakage density tracking

Languages: Java (expert), Python (primary scripting), JavaScript/TypeScript, Groovy, SQL, PSQL, Scala

Banking Domain: Wallet balance, transaction reporting, bank-to-bank transfer, QRIS national pilot, crypto exchange (CFX/Bappebti compliance)

Performance Testing: Gatling (Scala), Locust (Python), load simulations in CI/CD pipelines

WORK EXPERIENCE

GoTo Financial (GoPay) | Jakarta, Indonesia · Fintech

Software Engineer in Test *Jan 2023 — Present*

- ▸ Design and maintain Java-based test automation infrastructure for GoPay financial services serving 30M+ users across Indonesia, Malaysia, and Singapore — covering API automation (Java, TestNG, Cucumber, RestAssured, gRPC), mobile testing (iOS/Android via Appium), and observability via Grafana and Redis.
- ▸ Own end-to-end mobile application testing across Android and iOS for high-traffic financial features (Wallet Balance, Order History, User Summary, AI Recommendation, User Transaction Statement) — covering UI, backend, API, and integration layers.
- ▸ Integrate automated Java test suites into CI/CD pipelines (Jenkins, OpenShift, ArgoCD) — running regression gates on every PR with parallel test execution at scale.
- ▸ Engineered test coverage for GoPay's AI Recommendation engine — combinatorial test generation in Java, validation pipelines for 8M+ daily active users.
- ▸ Built the Crypto QA function from zero for the $10M GoPay Crypto product — banking sector crypto exchange, CFX + Bappebti regulatory compliance certification delivered in 11 months.
- ▸ Manage defect lifecycle in JIRA: identification, documentation, triage, cross-team coordination, leakage density tracking across multi-stakeholder banking programs.

Ruangguru | Jakarta, Indonesia · EdTech

Software Engineer in Test *Oct 2021 — Jan 2023*

- ▸ Architected and shipped a production-grade low-code test automation platform (Node.js, Playwright, Prisma) adopted by 50+ engineers across QA and product teams — scaling test coverage from 85% to 97% across 1,000+ test cases on a platform serving 53M+ students.

▸ Built custom Python libraries extending Robot Framework's capabilities — deployed as production-grade automation tools used across QA and product teams.

▸ Designed and operated a Kubernetes cluster for distributed Java and Python test execution — enabling parallel automation at scale across mobile and web platforms.

▸ Deployed FastAPI-based services to simulate payment flows across staging and production-mirrored mock environments — accelerating test cycle turnaround for payment-critical features.

▸ Built a Python-based performance testing suite with Locust-driven load simulations across critical user journeys — fully integrated into Jenkins CI/CD pipelines.

Vidio.com | Jakarta, Indonesia · Streaming Media

Test Engineer Team Lead *Dec 2018 — Oct 2021*

▸ Led the test engineering team owning QA strategy across Web, iOS, Android, and Smart TV for a streaming platform serving 45M+ MAU and 5M+ paid subscribers — sustaining 90%+ test coverage across all four surfaces.

▸ Architected Indonesia's first internally-controlled mobile device farm — writing custom Python services for infrared sensor control, STB and Android TV orchestration, and embedded system automation. Equivalent concept to LambdaTest/BrowserStack/Sauce Labs but built in-house for cost efficiency.

▸ Owned testing across multiple device types, screen sizes, and OS versions for Android (8-14), iOS (13-17), and Smart TV platforms (Tizen, webOS, Android TV) — exactly the multi-device testing surface Bonapolia's banking client needs.

▸ Built custom Robot Framework libraries in Python and FastAPI-based mock services to simulate payment flows, user sessions, and third-party integrations across staging environments.

▸ Integrated OCR technology into the Robot Framework pipeline via a custom-built Python library — enabling UI validation on TV platforms with no standard accessibility APIs (computer vision for QA).

▸ Mentored junior QA engineers on test automation best practices, device farm operation, and Java-based test case design.

Bank Indonesia (Central Bank of Indonesia) | Jakarta, Indonesia · Central Bank

Quality Assurance *Aug 2018 — Dec 2018*

▸ Executed comprehensive manual testing and UAT for Bank Indonesia's internal bank-to-bank transfer infrastructure — validating newly developed modules against complex financial compliance and business logic to ensure transaction reliability and cross-bank operational stability.

▸ Served as core UAT tester for Indonesia's national pilot of QRIS (Quick Response Code Indonesian Standard) — validating data accuracy and secure integration across participating banks ahead of wide-scale nationwide deployment.

▸ Owned end-to-end defect lifecycle management, requirement mapping, and cross-team test coordination via Jira across a high-stakes, multi-stakeholder financial infrastructure project.

Jenius (SMBC Bank) | Jakarta, Indonesia · Digital Banking

FullStack Developer *Jan 2018 — Apr 2018*

▸ Engineered frontend architecture for Jenius, Indonesia's first digital banking application — built with React.js under strict Test-Driven Development (TDD) methodology for mission-critical mobile-first banking services.

▸ Implemented a comprehensive testing strategy spanning unit testing (Jest), API mocking (Axios-Moxios), and cross-layer coverage (Sinon, Mocha, Chai, Karma JS) — achieving 98% across core banking modules.

EDUCATION

Jenderal Soedirman University *2012 - 2016*

Bachelor of Software Engineering — GPA 3.51
